The Logistics Branch of Ukraine's Armed Forces

The Logistics Branch of Ukraine's Armed Forces is an integral and extremely important part of the military machine, tasked with ensuring the smooth operation of the entire army under any circumstances. It plays a key role in the daily activities of Ukraine's Armed Forces, as well as during combat training, mobilization, strategic deployment and combat operations.

This branch consists of military units, subdivisions and institutions that provide combat units with everything they need to effectively resist the aggressor: from powerful weapons and ammunition, to vital medicines and food.

Although the logistics branch in Ukraine has a long history, its current formation was created relatively recently. In the spring of 2018, a presidential decree established the Logistics Branch Command within Ukraine's Armed Forces, uniting the logistics and weapons services. This was an important step in bolstering the country's defense capabilities. On 1 January 2022, the Logistics Branch was given the status of a separate branch.

Since the beginning of the full-scale invasion on 24 February 2022, the Logistics Branch has been supplying the defense forces with weapons, military equipment and other material resources under conditions of ongoing hostilities, and taking delivery of and distributing foreign military aid. Despite coming under direct fire, massive bombing, and missile and artillery strikes, the logistics branch personnel have been effectively fulfilling their tasks.

On 11 October 2023, Ukraine celebrated the Day of the Logistics Branch of Ukraine's Armed Forces for the first time. This holiday was celebrated on the day the Ukrainian Defense Ministry issued an order *On Approving the Basic Provisions for the Logistics Branch of Ukraine's Armed Forces*.

The logistics branch is a reliable body in the rear that provides Ukrainian military personnel with everything they need for a joint victory over the aggressor!

Glory to Ukraine! Glory to the Heroes!
